SUMMARY

A Data Scientist and Machine Learning Engineer with a strong background in NLP, Retrieval-Augmented Generation (RAG), and handling large-scale datasets. Experienced in building and deploying AI-powered solutions, including generative chatbots using LangChain and vector databases. Passionate about transforming complex data into actionable insights and scalable AI applications.

EXPERIENCES

Data Scientist & Machine Learning Engineer | Tabel Data Informatika

July 2023 - Present

- Developed and deployed generative chatbots using open-source LLMs, integrating LangChain with vector databases.
- Managed ETL processes for datasets exceeding 130 million records, improving data processing efficiency.
- Designed fraud detection models, customer segmentation algorithms, and recommendation systems to enhance business decision-making.
- Optimized data pipelines, reducing processing time through efficient feature engineering and parallelization.

Data Scientist Intern | Tabel Data Informatika

January 2023 - July 2023

- Assisted in data collection, extraction, and migration from multiple databases using Airbyte and SQL.
- Built predictive models for fraud detection, increasing fraud detection.
- Created data visualizations and reports using Metabase to drive data-driven decisions.

Data Scientist Intern | ID/X Parteners

October 2022

- Developed machine learning models to predict credit risk, optimizing model accuracy through hyperparameter tuning.
- Analyzed structured and unstructured data to enhance predictive performance.

EDUCATIONS

Telkom University | Diploma in Information Systems | CGPA: 3.81/4.0

2020 - 2023

- Graduated with cum laude distinction.
- Final project: Conducted sentiment analysis on user reviews of an e-commerce application using the K-Nearest Neighbors (KNN) algorithm.

ORGANIZATIONS

Staff Event and Creative Team | Telkom University Education Movement (TEAM)

2020 - 2022

- Organized university orientation programs and educational initiatives.
- Collaborated with team members to execute creative campaigns.

PROJECTS

- **Fraud Detection Model:** Designed an ML-based system to identify fraudulent transactions, improving fraud detection rates.
- **Customer Segmentation:** Developed clustering models to enhance targeted marketing strategies.
- **RAG Chatbot Development:** Built AI chatbots integrating LangChain with vector databases for improved information retrieval.
- **Data Analysis and Processing:** Led an end-to-end data analysis project managing and processing 130M+ records, ensuring data accuracy and generating actionable insights
- **System Recommendation:** Built a recommendation system using collaborative filtering techniques to recommend cars

SKILLS

- **Technical:** Machine Learning, Deep Learning, NLP, Generative AI, LLM Optimization (Fine-Tuning, Quantization), Fraud Detection, Computer Vision, Data Engineering
- **Tools & Programming:** Python, TensorFlow, PyTorch, Scikit-learn, LangChain, Milvus, ChromaDB, Elasticsearch, Ollama, SQL, ClickHouse, Neo4j, Airbyte, Metabase, FastAPI, GitHub, Jupyter Notebook, Google Cloud Platform (GCP)
- **Soft Skills:** Critical Thinking, Problem-Solving, Teamwork, Adaptability, Communication
- **Languages:** Indonesian (Native), English (Proficient)
